I. Daily_Meeting_7

- The weekly product road-map was approved by the members. Thus we were required to follow this road-map each week and complete the tasks assigned.

- We also discussed that we were required to build use-case diagram.

- Moreover we discussed solutions to a few questions such as:-

  Who has a stake in the solution to the problem?

  What are the unknowns? What data, functions, and features are required to properly solve the problem?

  Can the problem be compartmentalized? Is it possible to represent smaller problems that may be easier to understand?

  Can the problem be represented graphically? Can an analysis model be created?

- Thus, this questions were a subset of the major problem "Understand the Problem".
